

How do I create a module?

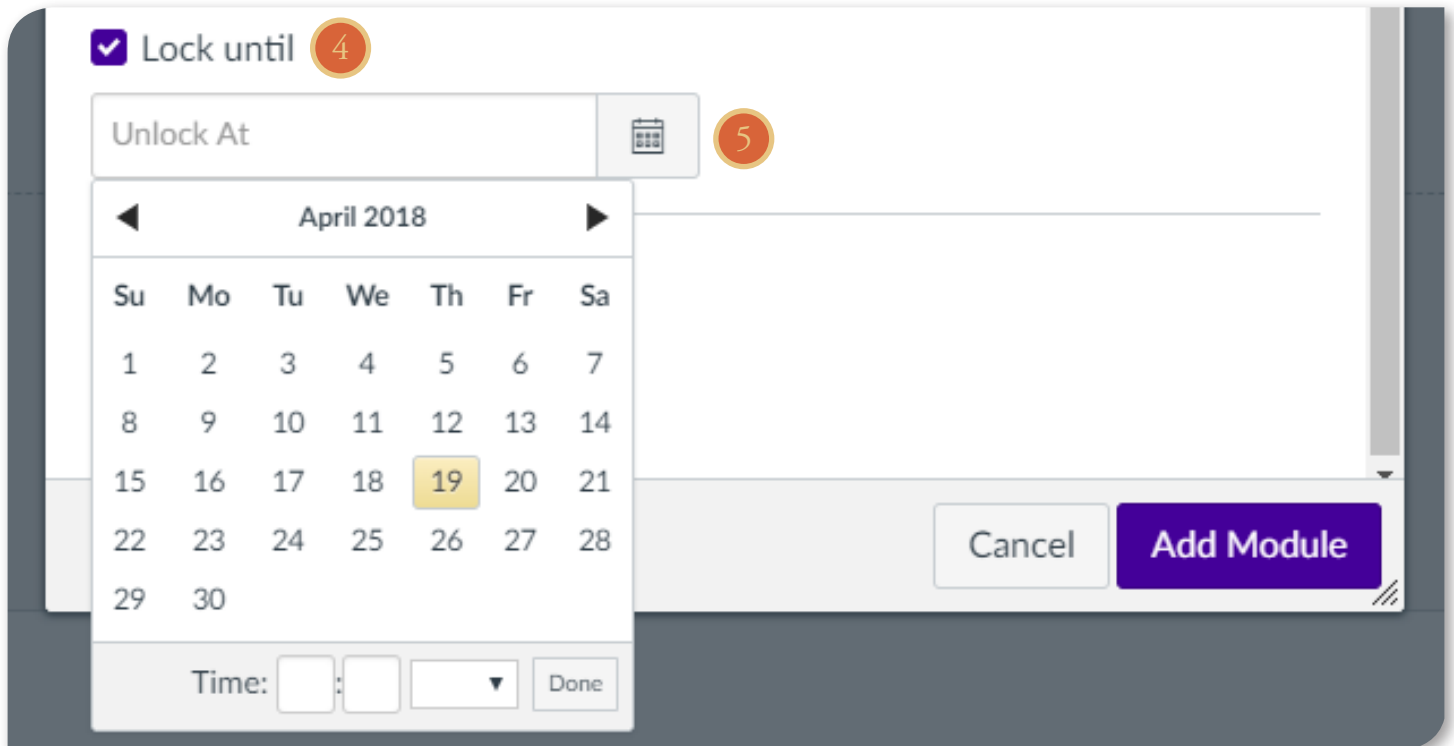

Modules are used to organize course content by weeks, units, or whatever organizational structure works for your course. With modules, you are essentially creating a one-directional linear flow of what you would like your students to do. Once you create modules, you can **add content items**, **set prerequisites**, and **add requirements**.

1. In Course Navigation, click the **Modules** link.
2. Click the **Add a Module** button.
3. Type a name in the **Module Name** field.

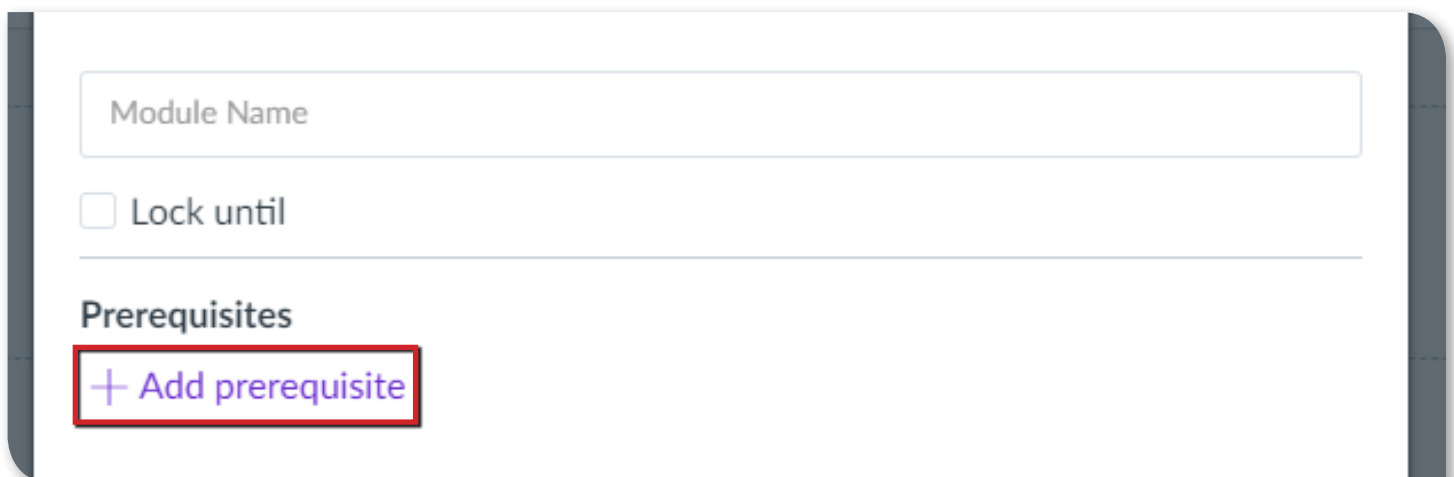

The screenshot shows the course navigation interface. At the top, there are three buttons: "View Progress", "Export Course Content", and "+ Module" (with a "2" badge). Below these is a sidebar with navigation options: "Quizzes", "Modules" (with a "1" badge), "Collaborations", "Chat", "Attendance", "LockDown", and "Browser". The main content area is titled "Add Module" and contains a "Module Name" input field (with a "3" badge), a "Lock until" checkbox, and a "Prerequisites" section with a "+ Add prerequisite" link.

If you want to lock the module until a specific date, click the **Lock until** checkbox [4]. To select a date and time, click the **Calendar** icon [5].

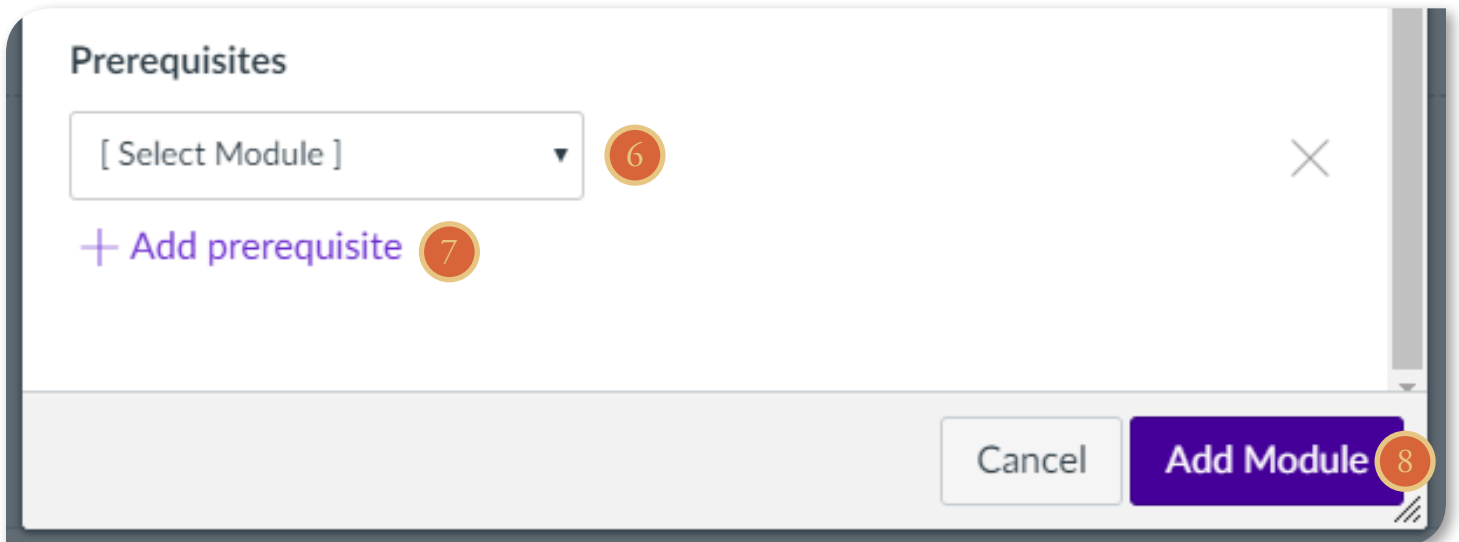

The screenshot shows a user interface for setting a lock date. At the top, there is a checked checkbox labeled "Lock until" with a circled number 4 next to it. Below this is a text input field labeled "Unlock At" with a calendar icon to its right, marked with a circled number 5. A calendar for April 2018 is displayed, with the date 19th highlighted in yellow. At the bottom of the calendar, there is a "Time:" field with two empty boxes for hours and minutes, and a "Done" button. To the right of the calendar, there are two buttons: "Cancel" and "Add Module".

If you have added at least one module to your course, you can require a prerequisite module. A prerequisite module means students must complete the added modules before they can view the new module. To add a module prerequisite, click the **Add prerequisite** link.

The screenshot shows a form with a "Module Name" input field. Below it is an unchecked checkbox labeled "Lock until". Underneath is a section titled "Prerequisites" with a red-bordered button labeled "+ Add prerequisite".

In the **Prerequisite menu** [6], select the module that should be completed before the new module. To add additional prerequisite modules, click the **Add prerequisite** link [7].

8. Click the **Add Module** button.

View your created module.

By default, your new module is unpublished. Learn how to **manage modules in draft state**.
